Product Information

Eczema Cream

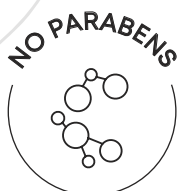

100% Natural

Our quick-absorbing natural eczema cream is engineered to provide fast relief for dry, flaky, and irritated skin. Natural ingredients with proven healing properties for centuries make this formula effective for deep-skin hydration. Formulated to maximise nature's therapeutic effects.

Your body is purely natural so it just makes sense to use skin products containing 100% natural ingredients. Our Eczema cream contains no synthetic fragrances, dyes, and potentially damaging chemicals, which are bad for your body and harmful to the environment.

Available with, or without CBD (Cannabidiol) infused.

- Deep-skin hydration
- Balanced for perfect harmony with your body's natural pH
- Promotes blood flow
- Non-greasy
- Non-comedogenic (will not clog pores)
- Non-medicated
- Paraben-free

Container sizes available in: 75ml

CBD (Cannabidiol) - CBD is only infused into products clearly marked as such.

Specific Ingredient Focus

Why Rose Hydrosol?

Rosa Damascena Hydrosol Organic is a staple ingredient in many natural rose water products; it has antibacterial, antimicrobial, and anti-inflammatory properties, thus helping soothe skin. It purifies and promotes cell regeneration. It hydrates the skin and retains moisture.

Why Aloe Vera?

Aloe Barbadensis Leaf Extract, or Aloe Vera, is a succulent plant which offers many benefits. Aloe Vera suits all skin types, in particularly dry, damaged, broken, sensitive, and irritated skin.

It offers soothing, anti-inflammatory, antimicrobial, antioxidant, anti-itch and humectant qualities for the skin. Traditionally Aloe Vera has been used to treat skin injuries (burns, cuts, insect bites, and eczemas).

Why Calendula Oil?

Calendula Marigold Extract is a natural oil extracted from marigold flowers (Calendula Officinalis). It's often used as a complementary or alternative treatment. Calendula Marigold Oil has anti-inflammatory, antifungal, as well as antibacterial properties.

These make it useful in healing wounds, soothing eczema, and relieving diaper rash.

Why CBD?

CBD (Cannabidiol) is a natural compound found in Cannabis plants. CBD is not impairing, meaning it does not cause a high. It is claimed that CBD improves blood flow.

CBD may have an anti-inflammatory effect on sebocytes, the skin cells that produce sebum. It helps to reduce inflammation. As an anti-inflammatory, CBD may be able to help reduce swelling, pain, and redness from existing breakouts, or irritation from skin conditions like eczema and psoriasis. CBD may help reduce various types of acne thanks to its ability to adjust how the body creates sebum.

CBD is claimed to help with dry skin and other skin conditions, making it beneficial for your skin. In an article published on the USA Government's website National Library of Medicine dated 30 June 2021, it is stated that "preclinical evidence suggests topical application of CBD may be efficacious for some skin disorders, and inflammatory diseases".
